

How to set up (install or upgrade) EmmA

Print this, then do ALL steps 1-10 or suffer unnecessarily.

Upgrading? Backup and keep your main EmmA folders NOW.

YOU MUST HAVE FONT HYPERTT.TTF INSTALLED ON YOUR PC

Choose “Run Anyway” whenever Windows or AntiVirus software warns you that EmmA files are suspect; they are not suspect, it’s just that there are relatively few EmmA users. Temporarily turn off Norton ‘Auto-protect’ or similar.

1. Download EmmA708.exe to an EMPTY folder, e.g. to C:\AAA
2. Start Windows Explorer (aka File Explorer)
3. Open the folder containing EmmA708.exe
4. Double click EmmA708.exe. If asked, overwrite files
5. Double click setup.bat
6. Double click your EmmA icon or \EmmA\EmmA.exe
7. <enter> <enter>
8. You’ll then be at EmmA’s MainMenu, so choose
9. <F>ile-browsing, then
10. rowse (and perhaps <P>rint) 1a thru 1e
